Direction : Read the following passage carefully and answer the questions given below it. Certain words are given in bold to help you to locate them while answering some of the questions.

Though the last twenty-five years have seen China dazzle the world with its excellent economic performance it has shied away from playing the kind of active role in international affairs that would seem commensurate with its economic weight. This is because traditionally Chinas politics have been defined by the need for economic development above all else. In the past Chinas authorities have tended to downplay the countries international clout, choosing to stress instead its developing country status and limited military capabilities. Such modest rhetoric was Intended to allay their fears that Chinas rise was causing across its immediate neighborhood. That Beijing is finally acknowledging its status as a major player in the international system is evidenced by the fact that the President has formally developed a theory of international relations the concept of harmonious world. The concept, encompassing broad notions of

multilateralism, prosperity for all through common development and tolerance for diversity has left world opinion perplexed. These are commendable objectives but the theory is short on specifics regarding the means to achieve them. Chinas recent willingness to be a more active player internationally, stems from complex factors. The country's economic strength having acquired the largest foreign exchange reserves in the world is undeniable and reports far it to be the largest economy in the next quarter of a century. For sustained double digit economic growth China thus has no choice but to become more active internationally. Moreover as a major proportion of the oil and other natural resources that China needs to feed its growing economy are imported., Beijing has to aggressively woo the countries rich in energy resources, which also represent emerging markets for Chinese products. To ensure a stable security environment within the region and thus facilitate economic growth China played an active role in facilitating negotiations with North, Korea. Destabilization of a potential flashpoint like the Korean peninsula would lead to a flood of refugees crossing the border, interrupting careful, plans of economic rejuvenation of Chinas North East. Chinas growing influence has caused a shift in the geopolitical status quo and its influence Is beginning to replace that of the United states and European powers in Africa. Chinas new diplomacy though has had its share of critics who have expressed their unease at Chinas military modernization programme and its willingness to deal with regimes widely condemned as corrupt and oppressive. Despite this when the Africa was in need of aid and infrastructure or the US needed help in negotiating with Korea they turned to China. By taking a lead in a variety of international and regional forums, initiating bilateral and military exchange and dispensing aid and technical assistance in parts of the world where traditional powers are Cautious to tread China has signaled that its days of sitting on the sidelines, content to let others shape world affairs are emphatically over.

Q23.
